Audio Technology Assessment Report Fall 2019

Author: Joseph F. van Gaalen, Ph.D., Asst. VP of Institutional Research, Assessment & Effectiveness

1 Introduction

Florida SouthWestern State College's Music Department employs a pre/post-test disposition survey as a means of assessing learning within the Audio Technology Certificate Program. The courses encompassed in this study include: MUS 2360 Introduction to Music Technology, MUM 2600C Basic Audio Recording Technique, MUM 2601C Recording Techniques (II), and MUM 2604C Multi-track Mixdown Techniques. The Audio Technology Program initiated AY 2017-2018 developed an assessment plan and piloted it in Spring 2018. In Fall 2018, this assessment expanded from MUM 2601C to the four coursed mentioned above. This report provides analysis of both the results of the assessment, as well as the assessment tool, in an effort to fine-tune the piloted assessment package.

For additional detail or further analysis not provided in this report, please contact Dr. Joseph F. van Gaalen, Asst. VP of Institutional Research, Assessment, and Effectiveness (jfvangaalen@fsw.edu; x16965).

2 Assessment Results & Recommendations

2.1 MUS 2360

2.1.1 Assessment Tool

The assessment method utilizes a disposition survey administered as a pre-test and post-test to gauge growth in varying topics associated with the course outcomes. The disposition survey consists of 20 questions, each intended to be rated on the same scale as shown below:

- 🌲 Very familiar
- Knowledgeable
- Somewhat familiar
- Minimal
- None

The questions used in the disposition survey are designed to ensure that by the end of term, students will have a strong knowledge of the core concepts of the course. The course outcomes for MUS 2360 applicable to this assessment are as follows:

- 1. Describe the historical interaction between technology and music.
- 2. Identify the properties of digital sound, and the technologies used to produce it.
- 3. Define the role of various computer hardware components used to create, produce, and distribute music.

- 4. Compare and contrast the functions and benefits of various computer software programs used to teach, create, or share music.
- 5. Describe the role of the internet in the creation and sharing of music.

The survey prompts of the disposition survey are shown below:

- 1. Can you describe what compression and rarefaction are as they relate to sound propagation?
- 2. Are you familiar with the mediums that allow sound to travel and their effect on sound waves?
- 3. Do you know all of the parts of the ear, and how sound is received by the brain?
- 4. Can you tell the difference between a rhythm transient and a ADSR wave?
- 5. Can you accurately explain the way that sound travels from the moment when a drum is struck until it reaches the listeners brain?
- 6. Do you know if there Is a difference between Hz and CPS and what they stand for?
- 7. Are you familiar with the differences of the 5 perceptional properties of sound vs. the 5 physical properties of sound?
- 8. Are you familiar with the 3 main (most common) types of microphones?
- 9. Are you familiar with the process of creating a well produced podcast?
- 10. Rate your experience working with ProTools.
- 11. Rate your experience with basic audio editing.
- 12. Rate your experience with basic MIDI input.
- 13. Rate your knowledge of the following digital effects: Reverb, Delay, and Modulation FX.
- 14. Rate your experience with basic MIDI editing.
- 15. Do you understand basic music theory? (pitch, duration, note, and rest values)
- 16. Can you enter notes, lyrics and chords into a score with a music notation program (Sibelius)?
- 17. Rate your knowledge of the following dynamic effects: EQ, and Compression.
- 18. Can you record audio into a DAW?
- 19. Are you familiar with tempo and changing the tempo value in a DAW?
- 20. Do you know the difference between Hi-Z and Lo-Z impedance?

2.1.2 Assessment Results

For the fall 2019 assessment, 10 artifacts were collected from the MUS 2360 pre-test and 9 from the post-test, accounting for 9 common artifacts between the pre-test and post-test. Results of pre-test and post-test by ordinal response percentage is shown in Figure 1 below. Increases in positive response are visible for all questions and exhibit exceptional growth. Questions 19 and 20 exhibit the weakest growth. Question 19 ("Are you familiar with tempo and changing the tempo value in a DAW?") exhibits only 33% change into a positive response. This is also the case for Question 20 ("Do you know the difference between Hi-Z and Lo-Z impedance?") which also only exhibits 33% change into a positive response. The question with the strongest growth is Question 9 "Are you familiar with the process of creating a well produced podcast?" which exhibits a growth into the positive of 89%.

Figure 3. FALL 2018 Comparison of responses to disposition questions 1-10 based on survey prompt. Questions from left to right (More negative to More positive) reflects the ordinal options "Disagree", "Somewhat Agree", "Agree", "Moderately Agree", and "Strongly Agree."

Another way of looking at these results is by comparing growth from pre-test to post-test utilizing overall responses (Figure 4). In other words, instead of reviewing the percentage of those responding negatively or positively to a particular prompt, we can review growth based on the overall percentage of those questions answered "None" versus those answered "Very familiar." In short, nine respondents mean a comparison of 180 questions answered (20 questions per respondent). In this comparison, 64% of all pre-test questions answered were answered with "None," or the most negative response. In the post-test, that percentage is 1%. Similarly, 4% in the pre-test reported "Very familiar," or the most positive response. In the post-test, that percentage is 34%.

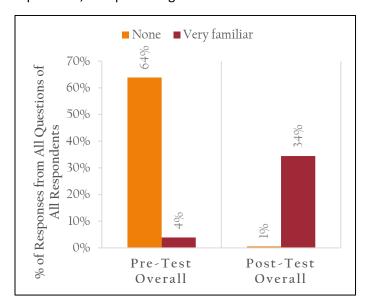

Figure 4. Comparison of percentage of responses from all questions by all respondents reporting "Disagree" or "Strongly Agree" in Pre-Test and Post-Test.

2.2 MUM 2600C

2.2.1 Assessment Tool

The assessment method utilizes a disposition survey administered as a pre-test and post-test to gauge growth in varying topics associated with the course outcomes. The disposition survey consists of 10 questions, each intended to be rated on the same scale as shown below:

- Very familiar
- Knowledgeable
- Somewhat familiar
- Minimal
- None

The questions used in the disposition survey are designed to ensure that by the end of term, students will have a strong knowledge of the core concepts of the course. The course outcomes for MUM 2600C applicable to this assessment are as follows:

- 1. Recognition of various audio aesthetics and identification of various properties of sound.
- 2. Describe and practice fundamentals of audio and post-production techniques.
- 3. Identify components of a sound studio and the responsibilities of individuals (such as studio manager, recording engineer, etc.) with that environment.
- 4. Compare and contrast analog and digital audio production technology.

The survey prompts of the disposition survey are shown below:

- 1. Rate your knowledge of the Protools File Menu functions.
- 2. Rate your knowledge of the Protools Edit Menu functions.
- 3. Can you accurately explain what a buffer is and the effect it has on latency?
- 4. How familiar are you with the editing technique called vocal leveling?
- 5. Can you describe the roles of the tracking engineer, editing engineer, and mastering engineer?
- 6. How do you rate your knowledge of mixing for vocals?
- 7. How do you rate your knowledge of mixing for electric guitars?
- 8. How do you rate your knowledge of mixing for drums?
- 9. How do you rate your knowledge of mixing for bass guitar?
- 10. Are you familiar with the process of bouncing, rendering or mixing down your tracks?

2.2.2 Assessment Results & Longitudinal Comparisons

For the fall 2019 assessment, 6 artifacts were collected from the MUM 2600C pre-test and 7 from the post-test, accounting for 6 common artifacts between the pre-test and post-test. Results of pre-test and post-test by ordinal response percentage is shown in Figure 5 below. Increases in positive response are visible for all questions and exhibit exceptional growth. Positive growth percentages range from 50% to 100%. The weakest growth is in question 9, "How do you rate your knowledge of mixing for bass guitar?". It is clear from the results of the study that students exhibit limited confidence upon entering the course and then exhibit growth. When comparing with fall 2018 results (see Figure 7), only question 6 exhibits any noticeable difference. In fall 2018 all questions exhibit little to no knowledge in the pre-test. However, in fall 2019 most students in question 6 report being 'somewhat familiar' with mixing for vocals. Growth in this area, however, is still strong for fall 2019.

			Scale	0%	20%	40%	60%	80%	100%						

Figure 7. **FALL 2018** Comparison of responses to disposition questions 1-10 based on survey prompt. Questions from left to right (More negative to More positive) reflects the ordinal options "Disagree", "Somewhat Agree", "Agree", "Moderately Agree", and "Strongly Agree."

Another way of looking at these results is by comparing growth from pre-test to post-test utilizing overall responses (Figure 8). In other words, instead of reviewing the percentage of those responding negatively or positively to a particular prompt, we can review growth based on the overall percentage of those questions answered "None" versus those answered "Very familiar." In short, six respondents mean a comparison of 60 questions answered (10 questions per respondent). In this comparison, 15% of all pre-test questions answered were answered with "None." This is 35 percentage points lower than fall 2018, where an earlier version of the assessment listed an option of "Disagree" as opposed to the modified "None" to more accurately reflect question format in the survey (Kuh et al., 2015). In the post-test, that 15% is now 0%, the same as fall 2018 where the move was from 50% to 0%. Similarly, 2% in the pre-test reported "Very familiar," or the most positive response. In the post-test, that percentage is 63%.

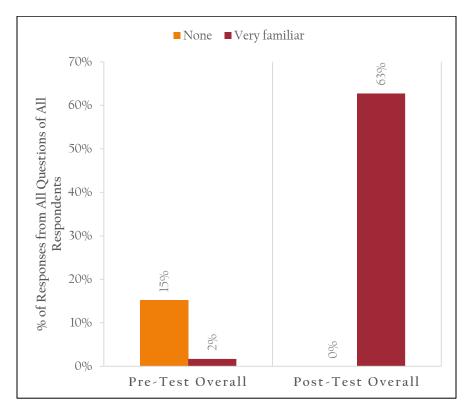

Figure 8. **FALL 2019** Comparison of percentage of responses from all questions by all respondents reporting "None" or "Very familiar" in Pre-Test and Post-Test.

2.3 MUM 2601C

2.3.1 Assessment Tool

The assessment method utilizes a disposition survey administered as a pre-test and post-test to gauge growth in varying topics associated with the course outcomes. The disposition survey consists of 10 questions, each intended to be rated on the same scale as shown below:

- Very familiar
- Knowledgeable
- Somewhat familiar

- Minimal
- None

The questions used in the disposition survey are designed to ensure that by the end of term, students will have a strong knowledge of the core concepts of the course. The course outcomes for MUM 2601C applicable to this assessment are as follows:

- 1. Apply knowledge of microphone, monitor, amplifier design through appropriate setup.
- 2. Describe and apply knowledge of signal flow and processing.
- 3. Demonstrate recording, mix down and mastering processes.
- 4. Describe aspects of digital and physical music recording production, manufacture, and distribution.

The survey prompts of the disposition survey are shown below:

- 1. Rate your experience with a mixing console.
- 2. Rate your experience with recording equipment direct to hard drive and direct to DAW.
- 3. Knowledge of recording room acoustics, diffusion vs. absorption and what frequencies are affected.
- 4. General differences in tonal quality as it relates to microphone proximity (placement).
- 5. Recording vocal tracks, miking techniques, and track capturing.
- 6. Recording Acoustic Guitar tracks, miking techniques, DI, and track capturing.
- 7. Recording Bass Guitar tracks, miking techniques, DI, and track capturing.
- 8. Recording drum / percussion tracks, close and far miking techniques, multiple vs. zone miking, and track capturing levels.
- 9. Recording electric guitar tracks, close and far miking techniques, multiple mics vs. DI, software modeling, and track capturing levels.
- 10. Rate your knowledge of microphone types, and the instruments that they should be used on.

2.3.2 Assessment Results

For the fall 2019 assessment, 8 artifacts were collected from the MUM 2601C pre-test and 7 from the post-test, accounting for 7 common artifacts between the pre-test and post-test. Results of pre-test and post-test by ordinal response percentage is shown in Figure 9 below. Increases in positive response are visible for all questions and exhibit exceptional growth. Questions 1 and 4, "Rate your experience with a mixing console" and "General differences in tonal quality as it relates to microphone proximity (placement)", are the only questions which exhibit growth less than 80%. Over four terms, positive growth has never been less than 50%. From an individual perspective, students exhibit limited confidence upon entering the course and then exhibit growth.

Figure 12. **SPRING 2018** Comparison of responses to disposition questions 1-10 based on survey prompt. Questions from left to right (More negative to More positive) reflects the ordinal options "Disagree", "Somewhat Agree", "Agree", "Moderately Agree", and "Strongly Agree."

Another way of looking at these results is by comparing growth from pre-test to post-test utilizing overall responses (Figure 13). In other words, instead of reviewing the percentage of those responding negatively or positively to a particular prompt, we can review growth based on the overall percentage of those questions answered "None" versus those answered "Very familiar." In short, seven respondents mean a comparison of 70 questions answered (10 questions per respondent). In this comparison, 33% of all pre-test questions answered were answered with "None," or the most negative response. In the post-test, that percentage is 0%. Similarly, 0% in the pre-test reported "Very familiar," or the most positive response. In the post-test, that percentage is 39%.

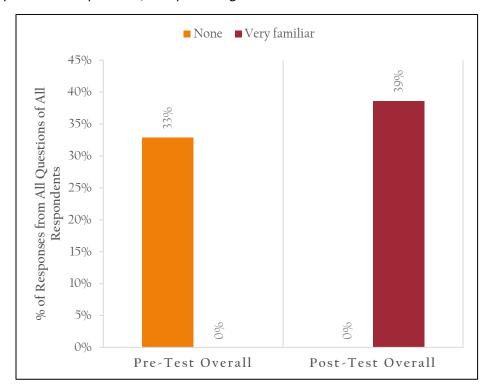

Figure 13. **FALL 2019** Comparison of percentage of responses from all questions by all respondents reporting "None" or "Very familiar" in Pre-Test and Post-Test.

2.4 MUM 2604C

2.4.1 Assessment Tool

The assessment method utilizes a disposition survey administered as a pre-test and post-test to gauge growth in varying topics associated with the course outcomes. The disposition survey consists of 10 questions, each intended to be rated on the same scale as shown below:

- Very familiar
- Knowledgeable
- Somewhat familiar
- Minimal
- None

The questions used in the disposition survey are designed to ensure that by the end of term, students will have a strong knowledge of the core concepts of the course. The course outcomes for MUM 2601C applicable to this assessment are as follows:

- 1. Describe effective sound and mix design.
- 2. Demonstrate equalization and dynamics processing.
- 3. Compare and contrast techniques for mixing vocal, drum, and instrumental tracks.
- 4. Demonstrate multi-track mixdown, editing, and final cut tracks on digital and analog masters.

The survey prompts of the disposition survey are shown below:

- 1. Rate your knowledge of the Side Chain Compression technique
- 2. Rate your knowledge of the sample replacement / sample enhancement technique.
- 3. Rate your knowledge of the Mastering process.
- 4. Do you understand how to EQ a mixing room monitor system?
- 5. Do you know the process to find standing waves and signal cancellation in a monitoring room?
- 6. Do you understand the difference between imaging and panning?
- 7. Do you understand the difference between Analog and Digital mastering?
- 8. Can you tell the difference between mixing styles: East coast, West coast, Southern, and European?
- 9. Rate your knowledge of what a RTA is and how it is used.
- 10. Rate your understanding of post mixdown or mastering automation.

2.4.2 Assessment Results

For the fall 2019 assessment, 9 artifacts were collected from the MUM 2604C pre-test and 10 from the post-test, accounting for 9 common artifacts between the pre-test and post-test. Results of pre-test and post-test by ordinal response percentage is shown in Figure 14 below. Increases in positive response are visible for all questions and exhibit exceptional growth. Question 8, "Can you tell the difference between mixing styles: East coast, West coast, Southern, and European?" exhibits a growth of only 33% in the positive sense, which is the lowest of any question. However, an additional 33% growth stems from a movement of "Negative" to "Neutral" responses. From an individual perspective, an interpretation of these values would mean students enter the course with some to little confidence in the topics and then exhibit growth.

			PRE-1	<u> EST</u>					POST	-TEST			CHANG	<u>E</u>

4	17%	33%	50%	0%	0%		0%	0%	17%	17%	67%		-50%	-33%	83%	30%
5	17%	33%	17%	33%	0%		0%	17%	0%	33%	50%		-33%	-17%	50%	0%
6	17%	33%	33%	0%	17%		0%	0%	0%	17%	83%		-50%	-33%	83%	-30%
7	17%	33%	50%	0%	0%		0%	0%	0%	50%	50%		-50%	-50%	100%	-60%
8	40%	40%	0%	20%	0%		0%	17%	0%	50%	33%		-63%	0%	63%	-90%
9	50%	17%	17%	17%	0%		0%	17%	0%	33%	50%		-50%	-17%	67%	
10	33%	50%	0%	17%	0%		0%	0%	17%	33%	50%		-83%	17%	67%	
			Scale	0%	20%	40%	60%	80%	100%							

Figure 16. **FALL 2018** Comparison of responses to disposition questions 1-10 based on survey prompt. Questions from left to right (More negative to More positive) reflects the ordinal options "Disagree", "Somewhat Agree", "Agree", "Moderately Agree", and "Strongly Agree."

Another way of looking at these results is by comparing growth from pre-test to post-test utilizing overall responses (Figure 17). In other words, instead of reviewing the percentage of those responding negatively or positively to a particular prompt, we can review growth based on the overall percentage of those questions answered "None" versus those answered "Very familiar." In short, nine respondents mean a comparison of 90 questions answered (10 questions per respondent). In this comparison, 15% of all pre-test questions answered were answered with "None," or the most negative response. In the post-test, that percentage is 0%. Similarly, 2% in the pre-test reported "Very familiar," or the most positive response. In the post-test, that percentage is 63%.

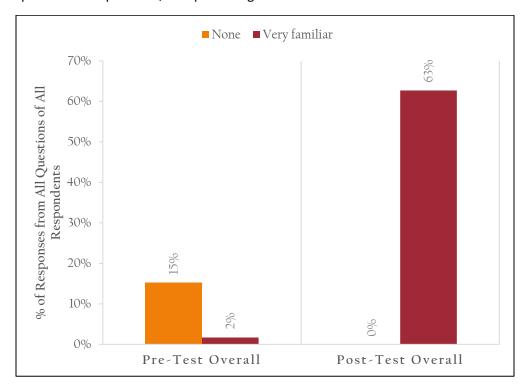

Figure 17. Comparison of percentage of responses from all questions by all respondents reporting "Disagree" or "Strongly Agree" in Pre-Test and Post-Test.

3 Program-Wide Comparison

As survey prompts are most often unique to each course, a global comparison by looking at these results by comparing growth from pre-test to post-test utilizing overall responses may be helpful (Figure 18). In other words, instead of reviewing the percentage of those responding negatively or positively to a particular prompt, we can review growth based on the overall percentage of those questions answered "None" versus those answered "Very familiar." In short, 40 respondents mean a comparison of 400 questions answered (10 questions per respondent or 20 questions for MUS 2360). In this comparison, 43% of all pre-test questions answered were answered with "None," or the most negative response. In the post-test, that percentage is less than 1%. Similarly, 2% in the pre-test reported "Very familiar," or the most positive response. In the post-test, that percentage is 40%.

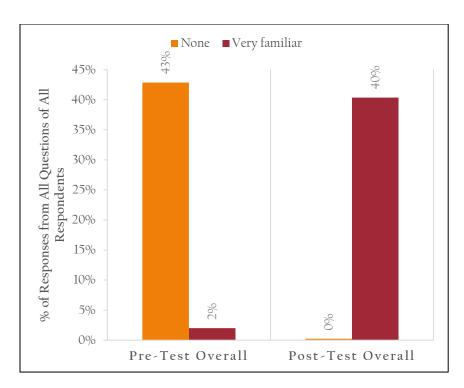

Figure 18. Comparison of percentage of responses from all questions by all respondents across all Audio Technology courses in the assessment plan reporting "None" or "Very familiar" in Pre-Test and Post-Test. For example, 43% reporting "None" in Pre-Test is 43% of 400 responses, the total of the number of students multiplied by the number of questions for each student.

4 COHORT COMPARISONS

4.1 DUAL ENROLLMENT (CONCURRENT) TO TRADITIONAL COMPARISON

No dual enrollment (concurrent) sections are offered for this course and so no comparison could be completed.

4.2 ONLINE TO TRADITIONAL COMPARISON

No online sections are offered for this course and so no comparison could be completed.

4.3 COMPARISON BY CAMPUS/SITE

The course is only taught at one location (Thomas Edison) and so no cross-campus comparison can be completed.

5 CONCLUSIONS

The Audio Technology Program initiated AY 2017-2018 developed an assessment plan and piloted it in Spring 2018. For Fall 2018, this assessment expanded from MUM 2601C to the four coursed mentioned above. For Fall 2019, the assessment likert scale options were modified to more accurately reflect the language of the prompts. The courses encompassed in this study include: MUS 2360 *Introduction to*

Music Technology, MUM 2600C Basic Audio Recording Technique, MUM 2601C Recording Techniques (II), and MUM 2604C Multi-track Mixdown Techniques. This report provides analysis of both the results of the assessment, as well as the assessment tool, in an effort to fine-tune the piloted assessment package.

5.1 MUS 2360

A drilldown of results are as follows:

- 1. For the fall 2019 assessment, 10 artifacts were collected from the MUS 2360 pre-test and 9 from the post-test, accounting for 9 common artifacts between the pre-test and post-test.
- 2. In a comparison of pre-test to post-test changes in survey responses by question, increases in positive response are visible for all questions and exhibit exceptional growth. Questions 19 and 20 exhibit the weakest growth. Question 19 ("Are you familiar with tempo and changing the tempo value in a DAW?") exhibits only 33% change into a positive response. This is also the case for Question 20 ("Do you know the difference between Hi-Z and Lo-Z impedance?") which also only exhibits 33% change into a positive response. The question with the strongest growth is Question 9 "Are you familiar with the process of creating a well produced podcast?" which exhibits a growth into the positive of 89%.
- 3. In a comparison of pre-test to post-test changes in survey responses by overall responses, 64% of all pre-test questions answered were answered with "None," or the most negative response. In the post-test, that percentage is 1%. Similarly, 4% in the pre-test reported "Very familiar," or the most positive response. In the post-test, that percentage is 34%.

5.2 MUM 2600C

A drilldown of results are as follows:

- 1. For the fall 2019 assessment, 6 artifacts were collected from the MUM 2600C pre-test and 7 from the post-test, accounting for 6 common artifacts between the pre-test and post-test.
- 2. In a comparison of pre-test to post-test changes in survey responses by question, increases in positive response are visible for all questions and exhibit exceptional growth. Positive growth percentages range from 50% to 100%. The weakest growth is in question 9, "How do you rate your knowledge of mixing for bass guitar?". It is clear from the results of the study that students exhibit limited confidence upon entering the course and then exhibit growth. When comparing with fall 2018 results, only question 6 exhibits any noticeable difference. In fall 2018 all questions exhibit little to no knowledge in the pre-test. However, in fall 2019 most students in question 6 report being 'somewhat familiar' with mixing for vocals. Growth in this area, however, is still strong for fall 2019.
- 3. In a comparison of pre-test to post-test changes in survey responses by overall responses, 15% of all pre-test questions answered were answered with "None." This is 35 percentage points lower than fall 2018, where an earlier version of the assessment listed an option of "Disagree" as opposed to the modified "None" to more accurately reflect question format in the survey. In the post-test, that 15% is now 0%, the same as fall 2018 where the move was from 50% to 0%. Similarly, 2% in the pre-test reported "Very familiar," or the most positive response. In the post-test, that percentage is 63%.

5.3 MUM 2601C

A drilldown of results are as follows:

- 1. For the fall 2019 assessment, 8 artifacts were collected from the MUM 2601C pre-test and 7 from the post-test, accounting for 7 common artifacts between the pre-test and post-test.
- 2. In a comparison of pre-test to post-test changes in survey responses by question, increases in positive response are visible for all questions and exhibit exceptional growth. Questions 1 and 4, "Rate your experience with a mixing console" and "General differences in tonal quality as it relates to microphone proximity (placement)", are the only questions which exhibit growth less than 80%. Over four terms, positive growth has never been less than 50%. From an individual perspective, students exhibit limited confidence upon entering the course and then exhibit growth.
- 3. In a comparison of pre-test to post-test changes in survey responses by overall responses, we see that 33% of all pre-test questions answered were answered with "None," or the most negative response. In the post-test, that percentage is 0%. Similarly, 0% in the pre-test reported "Very familiar," or the most positive response. In the post-test, that percentage is 39%.

5.4 MUM 2604C

A drilldown of results are as follows:

- 1. For the fall 2019 assessment, 9 artifacts were collected from the MUM 2604C pre-test and 10 from the post-test, accounting for 9 common artifacts between the pre-test and post-test.
- 2. In a comparison of pre-test to post-test changes in survey responses by question, increases in positive response are visible for all questions and exhibit exceptional growth. Question 8, "Can you tell the difference between mixing styles: East coast, West coast, Southern, and European?" exhibits a growth of only 33% in the positive sense, which is the lowest of any question. However, an additional 33% growth stems from a movement of "Negative" to "Neutral" responses. From an individual perspective, an interpretation of these values would mean students enter the course with some to little confidence in the topics and then exhibit growth.
- 3. In a comparison of pre-test to post-test changes in survey responses by overall responses, we see that 15% of all pre-test questions answered were answered with "None," or the most negative response. In the post-test, that percentage is 0%. Similarly, 2% in the pre-test reported "Very familiar," or the most positive response. In the post-test, that percentage is 63%.
